Professional Summary

Computer Science undergraduate and Backend Engineer with hands-on experience across production backend systems, AI/LLM applications, full-stack web development, and systems software. Builds end-to-end applications using C++, Python, Java, TypeScript, Flutter, FastAPI, and cloud technologies, with additional experience in computer vision, Linux, game programming, and embedded systems. Focused on designing scalable, efficient, and maintainable software.

Technical Focus

AI & Full-Stack Applications: Develops AI-integrated web applications, real-time chatbot experiences, and source-claim verification workflows using frontend, backend, and LLM technologies.

Backend, Systems & Embedded: Builds secure REST APIs and database integrations while exploring C++ systems software, Linux, embedded AVR prototypes, modular kernels, memory management, and inter-processor communication.

ML, Computer Vision & Games: Designs computer-vision models for environmental detection and develops 2D game, rendering, physics, input, and resource-management systems.

Technical Skills

Languages: C, C++, Java, Python, Dart, JavaScript, TypeScript, C#

Frameworks: Flutter, FastAPI, Flask, React, SDL2, Unity

Backend & DBs: REST APIs, Firebase, Firestore, SQLite, MySQL

Tools & Cloud: Git, Docker, Linux, SSH, Google Cloud Run

Core Concepts: Systems Programming, Embedded Systems, Game Development, Machine Learning, Computer Vision, AI Application Development, Software Architecture, OOP, Networking Fundamentals, Data Structures & Algorithms

Experience

Foxefy

June 2026 – Present

Backend Engineer

- Design and develop backend services for production applications.
- Build secure REST APIs, robust authentication systems, and database integrations.
- Collaborate with frontend developers to implement scalable, highly responsive features.
- Optimize application performance, scaling limits, and containerized deployment workflows.

Education

Aalim Muhammad Salegh College of Engineering, Avadi,
Tamil Nadu

Expected Graduation: 2029

B.E. in Computer Science and Engineering

Projects

ClaimGuard

TypeScript, Python, LLM Integration

Developed an open-source full-stack application for source-claim-based LLM verification, designed to address hallucination and prompt-injection risks through evidence-grounded responses and multi-LLM integration.

Repository: github.com/AjayCSE29/Claim-Guard

Disaster Crisis Management System

Flutter, FastAPI, Google Gemini AI

Architected an AI-driven emergency response platform featuring AI-assisted incident analysis, real-time interactive mapping, and a secure administration dashboard.

Repository: github.com/AjayCSE29/disaster-crisis-management

Ajax Engine

C++, SDL2

Developed a lightweight 2D game engine from scratch with optimized custom rendering, system input routing, and game resource management.

Repository: github.com/AjayCSE29/Ajax-Engine

Dreamer

Unity, C#

Currently developing a 2D Souls-like platformer game featuring customized action combat mechanisms, AI behaviors, structured save-state systems, animation management, and scalable software architecture.

Lunar Lander Simulation

C++, SDL2

Built a physics-based 2D orbital landing simulation incorporating customized gravitational mechanics, thruster forces, and precise bounding-box collision detection.

Repository: github.com/AjayCSE29/Lunar-Lander-using-C-SDL2

Litter Detection Model

Python, Machine Learning

Designed, trained, and tested a machine learning computer vision model for automated environmental litter and general object detection.

Repository: github.com/AjayCSE29/Litter-detection-using-machine-learning
